CS Subjects

DBMS

A Database Management System (DBMS) is specialized software used to create, store, retrieve, and manipulate data within a database. It acts as a secure intermediary between the database and end-user applications, allowing users to efficiently manage structured and unstructured information while ensuring consistency and security.

DS

A **Data Structure (DS)** is a specialized format used to **organize, store, manage, and manipulate data** efficiently on a computer. Choosing the correct data structure allows programmers to minimize memory usage (space complexity) and reduce execution speed (time complexity) during tasks like searching, sorting, inserting, or deleting information.

FEWT

Front-end web technologies build the client-side user interface. They dictate everything users see, click, and interact with on a website. The ecosystem is built on three core pillars: **HTML** (structure), **CSS** (styling), and **JavaScript** (interactivity).

WEB DESIGNING

WEB TECHNOLOGIES

HTML

HTML, which stands for **HyperText Markup Language**, is the standard standard language used to create and structure web pages across the internet. It acts as the structural skeleton of a website, instructing web browsers on how to display text, images, hyperlinks, and multimedia. [Web browsers](#) receive HTML documents from a [web server](#) or from local storage and [render](#) the documents into [multimedia](#) web pages. HTML describes the structure of a [web page semantically](#) and originally included cues for its appearance.

CSS

CSS (Cascading Style Sheets) is the code that styles web content. This article walks you through a basic understanding of CSS — how it works and how to improve the look and feel of the content structure you created in the previous article. Like HTML, CSS is not a programming language. It's not a markup language either. **CSS is a style sheet language.** CSS is used to style HTML elements: you select the elements you want to style and set values for their style properties, which define how they will look.

JavaScript

JavaScript is a versatile, dynamically typed programming language that brings life to web pages by making them interactive. It is used for building interactive web applications and supports both client-side and server-side development. JavaScript runs on the user's [browser](#), so it has a faster response time without needing to communicate with the [server](#). Can be used for a wide range of tasks, from simple calculations to complex server-side applications.

BHARAT

STATES

Gujarat

Gujarat, located in western India, is a vibrant state renowned for its rich cultural heritage, historical significance, and rapid economic growth. Boasting India's longest coastline, its landscape ranges from the arid salt deserts of the Great Rann of Kutch to the lush Gir National Park, home to the Asiatic lion.

As the birthplace of Mahatma Gandhi, the state holds deep historical roots dating back to the Indus Valley Civilization. Today, it stands as an industrial and agricultural powerhouse, celebrated globally for its entrepreneurial spirit, exquisite handicrafts, and delectable cuisine like *dhokla* and *fafda*.

Goa

Goa, located on India's western coast, is a vibrant state renowned for its sun-kissed beaches, lively nightlife, and rich historical heritage. Formerly a Portuguese colony until 1961, it offers a fascinating blend of Indian and European cultures, prominently reflected in its local cuisine, churches, and architecture.

Beyond the golden sands and bustling shores, this small state boasts lush greenery, rich biodiversity, and wildlife sanctuaries. Whether you are seeking water sports, tranquil cultural exploration in the capital city of Panaji, or vibrant festivals, Goa remains a premier travel destination in the country.

Assam

Assam is a vibrant state in Northeast India, famous for its breathtaking natural beauty, rich biodiversity, and cultural heritage. Nestled in the lush Brahmaputra Valley, it is globally renowned for its sprawling tea gardens and as the natural habitat of the rare one-horned rhinoceros at the UNESCO World Heritage site, Kaziranga National Park. The region is a melting pot of diverse ethnic tribes, celebrating its composite identity through vibrant festivals like Bihu. With its mighty rivers, dense forests, and deep historical roots, Assam remains one of India's most ecologically and culturally enchanting regions.

GAMES

OUTDOOR GAMES

Cricket

Cricket is a bat-and-ball game played between two teams of 11 players on a central 22-yard pitch. Teams take turns batting to score runs and fielding to dismiss batters. Formats like Test matches, ODIs, and fast-paced T20s offer dynamic action.

Originating in England, cricket is now a globally celebrated sport governed by the International Cricket Council. It is particularly beloved in the subcontinent, where it is a passionate cultural phenomenon uniting millions.

Volley Ball

Volleyball is a high-energy team sport where two teams of six players are separated by a high net. The objective is to score points by grounding the ball on the opponent's side, using a maximum of three hits before it must cross over.

Played both indoors and on sand beaches, the game prohibits holding or catching the ball; players must rely on quick reflexes, bumps, and sets. It requires immense stamina and elite hand-eye coordination.

Badminton

Badminton is a fast-paced racket sport played on a rectangular indoor court, where two or four players use lightweight rackets to hit a shuttlecock across a net. Originating from the game "Poona" in 19th-century India, it has evolved into a globally renowned Olympic discipline.

The objective is to land the shuttlecock within the opponent's designated boundaries to score points. A standard match consists of the best of three games, with the first player or team to reach 21 points winning the game. The sport is celebrated for building agility, sharp reflexes, and excellent cardiovascular fitness.

Video provides a powerful way to help you prove your point.

When you click Online Video, you can paste in the embed code for the video you want to add.

You can also type a keyword to search online for the video that best fits your document.

To make your document look professionally produced, Word provides header, footer, cover page, and text box designs that complement each other.

~~For example, you can add a matching cover page, header, and sidebar.~~

Click Insert and then choose the elements you want from the different galleries.

Themes and styles also help keep your document coordinated.

When you click Design and choose a new Theme, the pictures, charts, and SmartArt graphics change to match your new theme.

When you apply styles, your headings change to match the new theme.

Save time in Word with new buttons that show up where you need them.

Video provides a powerful way to help you prove your point.
